

## Job Description: Back End Developer (Mid)

**Position** : Back End Developer

**Reports to** : Chief Technology Officer (CTO)

**Location** : - TTDI Plaza, Taman Tun Dr Ismail, 60000 Kuala Lumpur, Malaysia

**Salary** : RM (Ringgit Malaysia) 5,000 - 8,000 + Performance Bonus

**About Us:** [www.versa.com.my](http://www.versa.com.my)

Established in 2020, Versa is a digital all in one Saving and Investing platform dedicated to help Malaysians unlock the potential of their wealth. Founded by a group of seasoned financial technology entrepreneurs, Versa introduces an innovative way to save at higher than fixed deposits (FD) rates but with the flexibility to withdraw their cash plus daily interests earned without incurring penalties. When ready to invest, Versa users can seamlessly move from savings to investing into affordable, actively managed portfolios from global top fund managers. Dedicated to helping users get the best out of their sleeping funds, Versa is focused on making their suite of user-friendly wealth management solutions more accessible to all Malaysians.

**The Role & Responsibilities:**

We are looking for a strong back end developer who welcomes both engineering and maintenance tasks. You will:

- Design and write with the cutting-edge language to improve the availability, scalability, latency, and efficiency of Versa's platform and range of services
- Work with back end engineering team to explore and create new design / architectures geared towards scale and performance
- Participate in code and design reviews to maintain our high development standards
- Engage in service capacity and demand planning, software performance analysis, tuning and optimization
- Collaborate with product and experience teams to define and prototype feature specifications
- Work closely with partnering infrastructure team in building and scaling back-end services as well as performing root cause analysis investigations
- Performance tuning and optimization
- Excellent verbal communication and interpersonal skills

**Requirements:**

- 2 to 4 years of backend development experience
- Proficiency in Java/JavaScript/NodeJS/Python
- Proficiency with writing automated tests
- Experience with developing, profiling, and debugging REST APIs
- Strong knowledge of MVC architectural patterns and the ability to choose the best solution available
- Excellent verbal communication and interpersonal skills

*If you are up for the challenge, kindly forward your CV to all 3:*
